# 10th International Conference on Sustainable Solid Waste Management

## WELCOME

On behalf of the Scientific and Organising Committee, I am pleased to welcome you to the **CHANIA 2023 10<sup>th</sup> International Conference on Sustainable Solid Waste Management**.

As in the cases of the previous international conferences, the **CHANIA 10<sup>th</sup> International Conference** aims to make a further step forward in the field of solid waste management through the promotion of innovative technologies and effective practices. We are happy to announce that the series of our conferences keeps attracting the attention of the academia, private and public sector local authorities and businesses. This is proven by the gradual increase in the numbers of participants, the participating countries, the abstracts received and papers presented during the conference. This year we expect to exceed the number of 1,000 participants including both virtual participants and those traveling to the beautiful island of Crete. Actually, it is the 2nd time we host a conference of this series in Crete, after the successful conference in Heraklion in June 2019, the last conference before COVID-19. Every year significant effort is made to improve the quality of the papers and keep high standards, as proven by the increase of the papers finally published in the collaborating journals with high reputation and high impact factors.

Quality is always our first and main criterion and that is why we are also establishing collaboration with new journals, e.g. this year we have for the first time: ENVIRONMENTAL POLLUTION (ELSEVIER, Impact Factor: 9.988) & ENVIRONMENTAL RESEARCH (ELSEVIER, Impact Factor: 8.431). At the same time, efforts are continuous in order to achieve high quality services for the conference participants. It is also important to mention the introduction for the 5th time of the summer school prior to the conference. More than 50 participants will attend the summer school this year and our aim is also to continue and keep it in all our future conferences giving emphasis to different research fields every year.

The **CHANIA 2023 Conference** aims to stimulate the interest of scientific community, competent authorities of public and private sector including local authorities, businesses, financial institutions, policy makers and society and present the latest developments and achievements in the field of solid waste management with special emphasis on municipal solid waste. Waste prevention, source separation, recycling and production of secondary materials, biological Treatment (aerobic & anaerobic), the treatment at central facilities constitute priority subjects of the conference agenda. Attention is drawn to bioprocesses, biorefineries in waste management to close the loops, circular economy and bioeconomy and of course WASTEtoENERGY with the contribution of the Waste-to-Energy Research and Technology Council, that is a co-organiser of this conference, with the active involvement of Prof. Nickolas Themelis, the father of the Council.

Emphasis is placed on circular economy in all key action areas (production, consumption, waste management, secondary raw materials, innovation, investment & monitoring) and all priority sectors (food waste, plastics, biomass and bio-based-products, construction & demolition waste, critical raw materials, textiles, etc.).

The Conference will provide an opportunity to bring together scientists & professionals from government departments, industries, Municipalities, private institutions, research & education institutions, being a forum for the exchange of the most recent ideas, techniques & experiences in a broad area of waste management.

A special Session will focus on solid waste management and the role of Local Authorities & Municipalities for taking advantage of both recyclable materials and biowaste and minimize residues for landfilling. The Conference agenda is rich and dense, offering a considerable variety of topics presented through more than 550 presentations within the twenty-six different oral sessions and an extensive poster session with more than 200 posters.

In addition, it is our intention to enlarge the conference benefits by including parallel sessions and events of ongoing projects within the conference agenda. The agenda includes this year the final event of the H2020 Project "WaysTUP! Value chains for disruptive transformation of urban biowaste into biobased products in the city context" Friday morning, while the Launching event of the LIFE CO2toCH4 project with title "Demonstration of a mobile unit for hybrid energy storage based on CO2 capture and renewable energy sources" has been scheduled on Thursday. Lastly, we have included in the agenda a LIFE networking session on Thursday organized by the new capacity building project Greek Life Task Force plus (LIFE21-CAP-EL-GRLTFplus) of the Green Fund in collaboration with ELMEN-EEIG, the external LIFE project monitoring team.

I would like to thank you all very much for joining us this year. Many of you are repeaters and we certainly appreciate that very much and we will continue our attempts to do our best at all levels in order to enlarge this warm conference family and meet every year. Also, I would like to thank the co-organisers, the Waste-to-Energy Research & Technology Council, the Region of Crete, the Municipality of Chania, the DEDISA that is responsible for municipal waste management in Chania and the sponsors for the support to the conference.

We hope you will find the **CHANIA 2023 Conference** interesting, useful and up to your expectations. After the hybrid conference last year in Corfu, we are happy that more speakers join us this year with physical presence and I welcome you all, either joining us with physical presence or virtually.
